

Nominee: Tarmin

Nomination title: Tarmin

Tarmin is the creator of the GridBank Data Management Platform. With GridBank, Tarmin is pioneering innovative new approaches to help organizations control their rapidly expanding data and address critical business challenges around continuously evolving data management and storage requirements.

The GridBank family of products address the key challenges faced by organizations seeking to better manage their existing mixed infrastructures or build their own modern multi-site, petabyte scale, geographically distributed data repositories. GridBank provides highly available, application aware access to information for users in pursuit of improved business operational efficiencies, strategic new undertakings, proactive responses to increased compliance mandates and analytic insight requirements.

In addition, GridBank empowers clients to lower costs and take benefit from its rich management capabilities for storing enterprise scale workloads, as well as its information governance framework for controlling risk and its big data analytic functionality for understanding information.

GridBank is in the vanguard amongst next generation data management technologies with numerous value creating innovative characteristics. Offering Policy-Orchestrated Object Storage, Fully Featured Software Solution for Unstructured Data, a Comprehensive Data Management Platform and Improved regulatory and data risk control significantly reducing storage costs.

Why nominee should win

- Replication and Disaster Recovery with Big Data Analytics
- Designed for massive scalability
- Multi-tenant multi-site design
- Targeted at MSP markets
- High availability allows providers to meet their SLAs
