

Nominee: 2bm ltd

Nomination title: ARM Data Centre Project, Texas

The design of the ARM NAHPC data centre fully embraces and surpasses the sustainability credentials and the requirements of the EU code of conduct for data centres and is arguably the most efficient HPC data centre in Texas.

The facility is an exceptional example of an energy efficient data centre with every aspect meeting and in some cases surpassing the requirements of the EU code of conduct for data centres. We believe that the design of the ARM NAHPC data centre fully embraces and surpasses the sustainability credentials required for commercial buildings with the city of Austin.'

Why nominee should win

- *delivery

- *small UK business working internationally

- * data center technology used

- *the data centre project Recieved Green Data Centre' and 'Innovation in the Medium-Data Centre' categories; narrowly missing out on a hat trick for a third award for 'Special Assignment Team' of the year.
